

Textual assignment below. Full resolution image can be found [here](#).

App prototype

Create a movie database app prototype using the Ionic Creator. The app prototype will contain following interactive views.

Side menu

Side menu will contain links to all main views of the prototype. All links should redirect the user to the respective view. It will consist of following links:

- Movie listing
- Login
- Signup
- Settings

Movie listing

A simple list of movies. List items should be linked to movie detail screen. Each list item should have a title, thumbnail image and rating. For the needs of the prototype, all list items will be linked to the same detail view.

Login

A simple form view will contain two inputs for username and password and a Login button. Button will have no function.

Signup

Another form containing inputs for user registration data. Following inputs will be present:

- Username
- First Name
- Last Name
- Email
- Password

The view will also contain a Signup button with no linking function.

Settings

Prototype of a settings screen. Will contain placeholders for user photo, user name and email. Should also contain some description text, several toggle inputs and/or checkboxes with any labels.

Movie detail

Movie detail will consist of three separate views. A button bar with links will be used for switching individual views. Buttons in the button bar should each have an icon next to their text.

Comments

Will contain a sample comment and a section for new comment. The comment section will consist of one input for user name and a textarea for comment text. Below the inputs will be a dummy Submit button with no function.

Videos

Will contain a video element linked to a real youtube or vimeo video (any video will do).

Info

Contains a short description of the movie (use Lorem ipsum or anything to your liking) and a line with rating.

Deploying the prototype

After creating and testing the prototype, change the app name config.xml to your name (for example Jan Novák), deploy it on Ionic View and share the app with both of us (rys@usertechnologies.com and vaclavik@usertechnologies.com)
